

SHAHZ SIDDIQUI

Senior Product Manager · AI, Ecommerce & B2B SaaS

Ottawa, ON · (613) 716-3781 · shahz.siddiqui@outlook.com · linkedin.com/in/shahz-siddiqui-lead · github.com/ShahzDevAventures

SUMMARY

Founder-operator product leader who found product-market fit the hard way. Co-founded Sirge and diagnosed 30–50% monthly churn as an ICP mismatch, then led the pivot from a failing ad-attribution Shopify SaaS into an AI-powered conversion optimization platform used by 15,000+ merchants (\$384K peak ARR). Ran 1,100+ customer discovery interviews and shipped 59 product iterations to reach PMF; implementations drive a 240% average conversion-rate improvement. Cut monthly burn from \$200K to \$40K in 3.5 months while keeping two-thirds of product velocity by rebuilding delivery around AI. Ships production AI (GPT-4o Vision, Claude, HuggingFace, AWS Lambda) with a two-developer team. Operating style: find the highest-impact problem, prioritize ruthlessly, and work with AI to fix it fast. Eight years of enterprise sales before product — builds what customers will actually pay for.

EXPERIENCE

Sirge Inc. | Co-Founder & Product Lead (CEO 2024–Present; COO 2022–2024)

Ottawa, ON · Feb 2022 – Present

AI-powered CRO platform and delivery practice for Shopify merchants. Named “Top AI Powered Shopify Growth Platform” by Retail Tech Insights (2026).

Product strategy & discovery

- **Diagnosed 30–50% monthly churn as a segmentation failure** — founder-led marketing had filled an enterprise-built product’s funnel with SMBs — and led the pivot away from a product with millions invested into an AI-powered CRO audit platform; grew to **15,000+ Shopify merchant users** and **\$384K peak ARR** with a \$52K best revenue month.
- **Built a structured discovery engine**: 1,100+ customer interviews and 59 shipped audit iterations (43 free, 16 paid); audits now generate **70% of company revenue** at a **15% free-to-paid conversion rate**.
- **Delivered a 240% average conversion-rate improvement** across 143 merchant implementations — the outcome metric the product is sold on.
- **Redesigned the business model** from customer pull (“how do we fix this?”) into service-enabled SaaS: 17 clients at \$7,500 (~\$127K high-margin revenue) on a \$99 subscription base, since scaled to \$22,500 engagements — **customer LTV \$99 → \$22,500**.

AI product & engineering

- **Shipped the production AI audit system** with a two-developer team — an 11-prompt workflow on AWS Lambda, Puppeteer, GPT-4o Vision and Claude, with HuggingFace models trained on purchase patterns across **800M+ customer-journey data points**; 15,000 merchants ran audits, converting to 6,357 app accounts.
- **Partnered with engineering** on a Kafka/Redis migration and database partitioning to unblock enterprise accounts, cutting report load times from minutes to seconds.
- **Owned incident response**: personally detected a production data-loss incident within 30 minutes and led the team through sub-12-hour restoration and proactive merchant disclosure.
- **Built the company’s AI operating system** on Claude Code — a 23-file workspace with agent definitions, a ClickUp MCP workflow integration, and a skill library (CRO audit, bug-fix, Figma-to-theme build, feature update, conversion copywriting, wireframing) so a small team ships like a large one.

Operations & delivery

- **Cut monthly burn from \$200K to \$40K (~\$1.9M annualized) in 3.5 months** through a 28-to-8 restructure, keeping **67% of product velocity** by rebuilding delivery around AI tooling — 4 PRDs/week with 2 developers vs. 6 with 6 previously.
- **Lead hands-on delivery for 6 Shopify Plus clients (2025–26)**: conversion audits, CRO copy, and Figma-to-Liquid theme builds at \$7,500–\$22,500 per project; flagship result **+122% conversion rate** in the off-season for a Shopify Plus brand doing \$1.5M+/month.
- **Built an AI-assisted Figma-to-Liquid pipeline** that compresses 8–12 week redesign builds to roughly one week plus developer polish, backed by a 200+ Liquid section library, GrowthBook A/B testing infrastructure, and a design-system-bound AI design pipeline that stops generic output.

Shoebox Ltd. | Account Manager

Ottawa, ON · 2018 – 2021

- Owned a **\$1.2M territory across 12 US states** and 80+ accounts; closed the FBI and US Department of Justice; 92% retention; top salesperson two consecutive quarters.
- Proposed a flexible monthly subscription model after 100+ clinic interviews — the product team launched it and it grew to **30% of division revenue**.
- Identified a competitive gap (no audiologist support) through enterprise conversations and partnered with product and go-to-market to launch a remote audiologist network, unblocking large enterprise deals.

Trading Central | Territory Manager, Americas

Ottawa, ON · 2016 – 2018

- Identified a quant hedge fund segment and worked with product to reposition a signal database as a standalone product — 6 deals at \$18K/year.
- Led the HubSpot CRM migration for a 16-person global sales team (evaluation, data migration, training), contributing to a **6.2% company-wide sales increase**.
- Developed two new market segments (+20% subscription sales) and launched three client-engagement initiatives generating 146 qualified leads.

Class C Solutions Group | Sales Representative

Ottawa, ON · 2014 – 2015

- Grew existing-account sales 36% and added 18 new accounts across an 80+ client territory.

Deloitte | Tax Analyst

Ottawa, ON · 2012 – 2013

- Financial statement compilations, tax research, and financial modeling, including management compensation modeling on an acquisition engagement.

OPEN-SOURCE PROJECTS

github.com/ShahzDevAventures — AI agent skills that package Sirge's methodology

- **cro-audit-skill** — 10-step conversion rate optimization methodology for Shopify stores, packaged as an AI agent skill.
- **ecommerce-copywriter** — three-mode conversion copywriting tool for Shopify brands (supplements, apparel, baby, coffee verticals).
- **shopify-wireframe** — generates desktop and mobile HTML wireframes for Shopify Dawn theme stores from CRO audit inputs.
- **stitch-design-taste** — configurable design-taste profiles that prevent poor AI-generated frontend design.

SKILLS

Product: customer discovery & user research, product-market fit validation, roadmap prioritization, metrics & instrumentation, hypothesis-driven development, PRDs, agile / sprint planning, A/B testing & experimentation, conversion rate optimization, cross-functional leadership

AI & technical: AI / LLM product development (GPT-4o, Claude, HuggingFace), prompt engineering, Claude Code, Cursor, Portkey, AWS Lambda, Kafka, Redis, SQL, Shopify / Meta / Google APIs, Shopify Liquid, GrowthBook

Analytics: Mixpanel, GA4, PostHog, Optimizely, Microsoft Clarity, heatmaps **Go-to-market:** enterprise sales, account management, Salesforce, HubSpot, ClickUp

EDUCATION

Bachelor of Commerce (Honours), Accounting — University of Ottawa

2012

Google Product Development Certificate
